

Tutorial 07. Setting Null Values

Sometimes you might want to clear certain values that are already in Workfront.

When might I use this?

Excel Updater will only push spreadsheet values into Workfront if the spreadsheet cell is not blank. When a spreadsheet cell is blank, that cell is simply skipped by Excel Updater.

But sometimes you really do want to clear a Workfront field.

The syntax

To clear a specific field in Workfront, put “~~NULL~~” in the spreadsheet cell.

C
Description
~~NULL~~
