

AtAppStore Enterprise Stopwatch

Installation and Configuration Guide

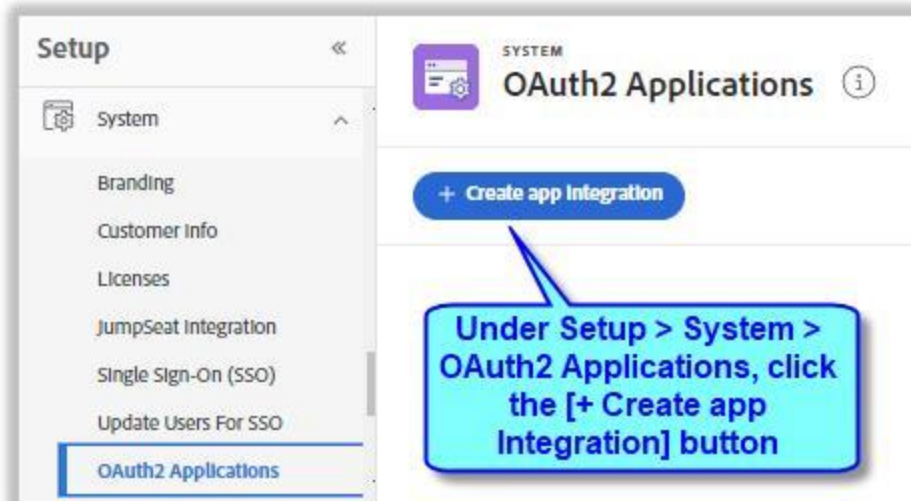

This guide (rev 2026-07-02) is for Adobe Workfront customers who authenticate via Adobe Admin Console as shown in the screen shot below

NOTE: In order for us to configure either a 30 Day Trial or Annual Enterprise Stopwatch license, you will first need to create an API Key under a dedicated Workfront System account in the desired lane (i.e. my, preview, sb01, or sb02) as per the Adobe Workfront instructions below and then share it, your desired lane, and your Workfront domain with us via sales@atappstore.com:

<https://experienceleague.adobe.com/en/docs/workfront/using/administration-and-setup/manage-wf/security/manage-api-keys>

With that API Key and license in place, you can then log in as that same dedicated Workfront System Account and complete the remainder of this guide within Workfront

New OAuth2 application

Select an authentication method and enter a name for your app.
You can change the name later in General Settings.

Authentication method

- ☐ Machine to Machine Application
 - Best for CLIs, daemons, or scripts running on your server (e.g.: Shell, Python)
 - Authentication through JSON Web Token with public/private key-pair encoding.
- ☒ Single Page Web Application
 - Best for mobile or single-page web applications (e.g.: Javascript, Angular, React, Vue).
 - Authentication through OAuth 2.0 Authorization Code flow with Proof Key for Code Exchange (PKCE).
- ☐ Web Application
 - Best for server-side applications that handle credentials and tokens on the server (e.g.: Go, Java, ASP.Net, Node.js, PHP).
 - Authentication through OAuth 2.0 Authorization Code flow.

SYSTEM

AtAppStore | Enterprise Stopwatch ⓘ

Basic Information

Copy the Client ID (in order to paste it at a later step)

Client ID

Copy the client ID for using your applications

4a60ddb399977de4ccbf8399977d46c2

Client Secret

Use Proof Key for Code Exchange (PKCE) instead of a client secret:

- The client app generates one-time keys Code verifier and Code challenge.
 - Code verifier is a random URL-safe string with a minimum length of 43 characters
 - Code challenge is Base64 URL-encoded SHA-256 hash of the code verifier
 - Sends Code challenge with authorizing request and Code verifier with the token request
- You need to add code in your client app to generate the code verifier and code challenge

Redirect URLs

Users will be redirected to this path after they have authenticated with workfront. The path will be appended with the authorization code for access, and must have a protocol. It can't contain URL fragments, relative paths, or wildcards, and can't be a public IP address.

<https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html>

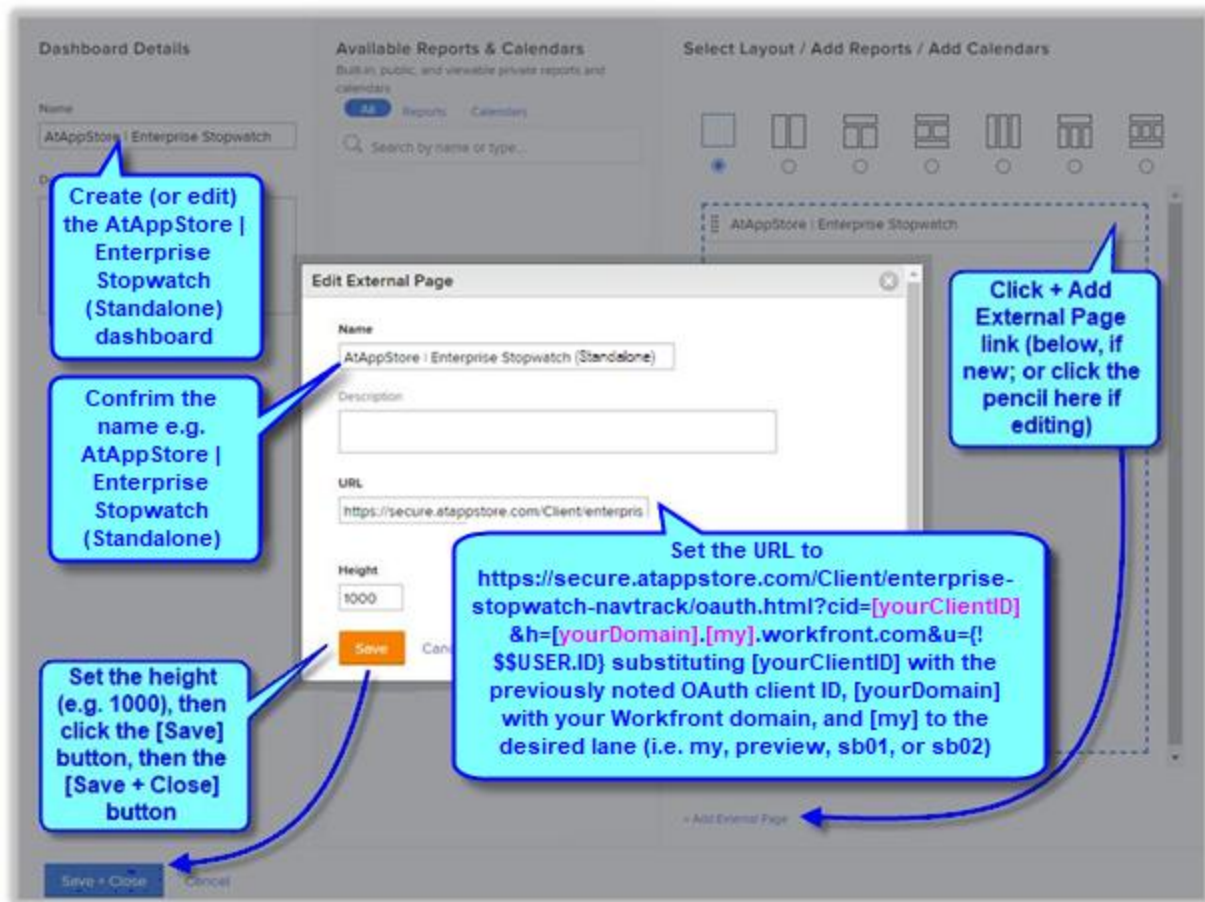

+ Add another

Type in the Redirect URL as follows:
<https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html>

Save

Cancel

Click the [Save] button

TIP: for cut/paste/edit of the above URL [https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=\[yourClientID\]&h=\[yourDomain\].\[my\].workfront.com&u={!\\$USER.ID}](https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=[yourClientID]&h=[yourDomain].[my].workfront.com&u={!$USER.ID})

The above [AtAppStore | Enterprise Stopwatch \(Standalone\)](#) dashboard provides our classic “Standalone” functionality of opening up “separately and along side” of Workfront so that users can then search for, find, Start and Stop items of interest using the Enterprise Stopwatch interface. Optionally, you may also create the following dashboards in a similar fashion to enable the NavTrack feature, so that as users navigate within Workfront to Projects, Tasks, and/or Issues of interest, Enterprise Stopwatch will *automatically* open, filter for, find, and Start the timer for such items:

[AtAppStore | Enterprise Stopwatch \(Project\)](#)

[https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=\[yourClientID\]&h=\[yourDomain\].\[my\].workfront.com&u={!\\$USER.ID}&taskid={!ID}](https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=[yourClientID]&h=[yourDomain].[my].workfront.com&u={!$USER.ID}&taskid={!ID})

[AtAppStore | Enterprise Stopwatch \(Task\)](#)

[https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=\[yourClientID\]&h=\[yourDomain\].\[my\].workfront.com&u={!\\$USER.ID}&taskid={!ID}](https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=[yourClientID]&h=[yourDomain].[my].workfront.com&u={!$USER.ID}&taskid={!ID})

[AtAppStore | Enterprise Stopwatch \(Issue\)](#)

[https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=\[yourClientID\]&h=\[yourDomain\].\[my\].workfront.com&u={!\\$USER.ID}&taskid={!ID}](https://secure.atappstore.com/Client/enterprise-stopwatch-navtrack/oauth.html?cid=[yourClientID]&h=[yourDomain].[my].workfront.com&u={!$USER.ID}&taskid={!ID})

Share the dashboard(s) with the desired users

AtAppStore | Enterprise Stopwatch NavTrack (Task) example

AtAppStore | Enterprise Stopwatch NavTrack (Task)

By placing the AtAppStore | Enterprise Stopwatch NavTrack (Task) custom tab in this top "default" position, it automatically launches (as designed) as users navigate

NOTE: users who prefer NOT to have this automatic behavior can simply drag this custom tab "down"

stopwatch launched!

Upon opening, Enterprise Stopwatch then searches for that same "Task B" and automatically starts its timer, freeing the end user to continue their work without having to take those same steps manually, and will run until they click the time to Stop it, or navigate to another such Task which will then prompt them to first Stop and save the time (not shown)
